

BIM 360 Design – Essentials

Using cloud-based technology specifically built to support the collaboration of Building Information Management workflows, BIM 360 Design helps you coordinate and communicate with all project members regardless of where they are located. This BIM 360 Service takes advantage of cloud services and web viewer technology to foster team communication.

This course will cover what is needed to setup, manage, work in and collaborate using the service. The BIM 360 Design workflow has several levels of interaction, with some participants having more of IT or administrators need, others focusing on the modeling and coordination, and still others needing to use it to communicate and review, there's features for everyone in the project workflow that we will cover.

Who should attend?

Autodesk Revit users who want to learn how to setup, manage and take advantage of all the features of the Collaboration for Revit service and its connection to A360 Team.

Prerequisites

Autodesk Revit 2018.3 and 2019 users who want to learn how to setup, manage and take advantage of all the features of the BIM 360 Design service and workflow.

Course Outline

- Getting Started
 - Understanding what BIM 360 is, and where BIM 360 Design fits into the ecosystem.
 - What BIM 360 Design can and can't do
 - BIM 360 Terminology
- BIM 360 Administration
 - Managing Hub Members and Companies
 - Tracking usage
 - Customizing the service
 - Managing Projects
- Setting up your BIM 360 Project
 - Creating a project
 - Activating and setting up your services
 - Adding users, understanding roles, managing entitlements
- Setting up the Document Management Service
 - Folder structure and permissions
 - PDF specific features
 - Uploading content
 - Using the Desktop Connector
- Working in Revit
 - What changes in Revit for users
 - Linking to other files
 - Managing cloud publish sets and cloud files
- Managing the BIM 360 Design Collaboration service
 - Creating and working with Packages
 - Comparing package versions
 - Consuming submitted packages
- Working in BIM 360 Document Management
 - Viewing files
 - Markups and Issues
 - Version Comparisons
- BIM 360 Mobile App
 - Connecting, Viewing and Marking up content
