

# Elevate **Revit** Project, Data & Document Management

Tailored for streamlining Autodesk Revit workflows, BIMrx Core improves project setup, data/model management and documentation processes for all disciplines.

This native integration is developed for project stakeholders seeking to reduce the low-value processes associated with BIM project delivery. BIMrx Core speeds up data entry and management then produces documentation for collaboration with Revit and non-Revit users alike.

From creating, duplicating, and placing views via Microsoft Excel to selecting linked elements and creating a counterpart in an active document, BIMrx Core maintains a variety of time-saving features that allow users to focus on transformation and innovation throughout their business.

## KEY FEATURES

Sheet View Manager

Renumbering

Copy/Monitor+

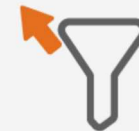

Create Table in  
Revit from Excel
