

BIMrx Fabrication DBS

Comprehensive Content & Streamlined Workflows, **All-in-One Optimized Database**

The BIMrx Fabrication DBS is an optimized database solution for Revit that was purpose-built by experienced Fabrication Specialists and VDC modelers to meet the specific needs of Fabricators. The database includes features, templates and files for creating and organizing connectors, folder structures and Bill of Materials, all while saving time searching for parts and updating models. Incorporated ITM content has been built to specifications to support real-world projects, global naming conventions and a native integration with BIMrx Fabrication.

When paired with our administration services, the BIMrx Fabrication DBS can streamline your firm's design and project management workflows. Our team will manage maintenance requests, add new content as-needed and update files based on industry standards, leaving you to focus on delivering projects that exceed client expectations.
