

BIMrx Fabrication increases productivity and revenue for VDC designers, detailers and contractors. Streamline pipe, duct and MEP modeling with features that easily align and connect fittings, and auto elevate and pitch branch lines to connect into pitched mains, all without changing views! The comprehensive set of features also includes automating hanger layouts, annotation and tagging, simplifying multiple sleeve placement and easing creation of auto-annotated spool drawings with BOM lists.

Access deeper fabrication settings for more detailed takeoffs with speed and accuracy via BIMrx Fabrication's comprehensive commands and features, built by contractors for contractors.

## KEY FEATURES

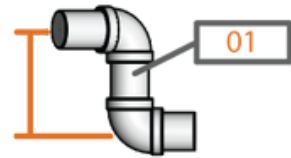

### Modeling and Modifying Efficiencies and Detailing

**Sync Fab Parameters**

**Selection BOM**

**Spooling and Renumbering**

**Automate Tagging with Tag Select**

**View Hanger Arrays with Configurable Spacing**

**Export CSV to Total Station**
